**PEACE DEMANDS ACTION**

**One nuclear weapon,  
detonating over a city,  
would instantly burn away  
40-65 square miles.** That is  
roughly the entire size of San  
Francisco, and 2-3 times the  
size of Manhattan.

# 7 Facts on Nuclear Weapons we can't afford to forget:

**1. One 5 megaton nuclear bomb has as much explosive power as all explosives used in World War II.** The U.S. has over 4,800 nuclear bombs.

**2. The nuclear weapons on a single trident submarine can destroy over 40 million people\*.** The United States has 14 trident submarines.

**3. A large-scale nuclear war would put 150 megatons of smoke and particles into Earth's atmosphere.** The sun would be blotted out, crops would suffer worldwide, and there would be a nuclear winter chiller than the ice age.

**4. The United States conducted over 1,000 nuclear tests between 1945 and 1992, causing increased radiation levels for tens of thousands.** An estimated 6,000 people will die from thyroid cancer as a result.

**5. One nuclear weapon, detonating over a city, would instantly burn away 40-65 square miles.** That is roughly the entire size of San Francisco, and 2-3 times the size of Manhattan.

**6. 120,000 - 200,000 people immediately died in the bombings of Hiroshima and Nagasaki.** Hundreds of thousands more died in the following months and years from acute radiation poisoning.

**7. Remember Hiroshima:** The yield of one of the several nuclear weapons deployed on a typical American stealth bomber is **seventy times more powerful than the device that destroyed that city.**
